

Mohamad Ali Ali Tarhini

Beirut, Lebanon | mhd.ali.tarhini@gmail.com | +961 71362458 | [linkedin.com/profile](https://www.linkedin.com/profile)

PROFESSIONAL SUMMARY

Communication & Computer Engineering graduate with practical experience in software development, network configuration, and cybersecurity operations. Proficient in Java, Python, and C++, with proven ability to design and implement communication systems, troubleshoot complex network issues, and develop scalable software solutions. Skilled at coordinating across teams and eager to apply engineering expertise to innovative projects.

EDUCATION

B.Sc. in Communication & Computer Engineering

Lebanese International University, Beirut, Lebanon

Graduated: 2021-2024

M.Sc. in Communication & Computer Engineering

Lebanese International University, Beirut, Lebanon

2025 – Present

EXPERIENCE

Network Intern

Potech Company, Beirut, Lebanon

Jan 2024 – Mar 2024

- Configured and optimized IP routing and switching (TCP/IP, subnetting). Applied networking principles to enhance cybersecurity practices and system reliability.

Cybersecurity Trainee (CTF Program)

Semicolon CTF, Beirut, Lebanon

June 2024 – Aug 2024

- Solved challenges in web exploitation, cryptography, and digital forensics.
- Leveraged Burp Suite, Wireshark, and hash-cracking tools to identify and remediate vulnerability.
- Partnered with team members to tackle complex challenges under time constraints.

Software Development Intern (Submarine Cable Map Project)

Orange Telecom, Lebanon

June 2025 – Aug 2025

- Designed and deployed a responsive web application using HTML5, CSS3, JavaScript, and Leaflet.js for global submarine cable visualization.
- Processed and analyzed large geospatial datasets.
- Implemented routing algorithms for direct and multi-hop cable connections.
- Developed an intuitive UI with live search, hover effects, and caching for seamless user experience.

Web Application Security and Bug Bounty Trainee

Semicolon Academy, Lebanon

Oct 2025 – Present

- Completed an intensive professional-level cybersecurity program focused on ethical hacking and bug bounty hunting, with over 35 hours of practical, hands-on training.
- Performed manual security testing on web applications using Burp Suite, including request interception, parameter tampering, and vulnerability validation.

- Identified and exploited common web vulnerabilities such as Cross-Site Scripting (XSS), Server-Side Request Forgery (SSRF), XML External Entity (XXE) injection, authentication flaws, and information disclosure.
- Analyzed web architecture and HTTP workflows to understand attack surfaces and bypass security controls.
- Applied bug bounty methodologies aligned with real production environments and public vulnerability disclosure programs.

PROJECTS

Engineered a multiplexing system

Designed and implemented a multiplexing system using **amplitude modulation, summing circuits, and band-pass filters** in the Analog Communication Lab. Tested system performance across multiple carrier frequencies. (*Analog Communication, AM Modulation, Signal Processing, Filters*)

Final Year Project – Digital Receipts System

Developed and deployed **Java-based mobile applications** to digitize supermarket receipts using **QR code generation and scanning**. Enabled secure digital storage for customers and streamlined receipt generation for retailers. (*Java, Android Studio, QR Code Integration, Database Management*)

SKILLS

- Technical Skills: Java, Python, C++, PHP, JavaScript, HTML, CSS, SQL
- Networking & Tools: Cisco Packet Tracer, Linux (Kali Linux), Burp Suite
- Development Tools: Android Studio, Visual Studio Code, LTspice, Proteus, XAMPP
- Soft Skills: Team coordination, Problem solving, Adaptability
- Languages: Arabic (Native), English (Intermediate)
